

inLight Remote Wireless Management System

Thalea

System Description

The inLight Remote Management system offers a complete solution for the Adaptive Street Lighting Control based on the 2.4 GHz IEEE 802.15.4 Standard. With the system you can control from a single light point to a entire groups of light points; configure the scheduler for 4 seasons, 7 days in a week with a 15 minutes interval; have the outside triggers like traffic intensity and weather status to adapt the light intensity in order to declassify the road type when and where this is permitted by the EN 13201 recommendations.

The system consist of three basic components:

- inLight Application Server
- inLight Gateway
- inLight Slave modules

Thalea

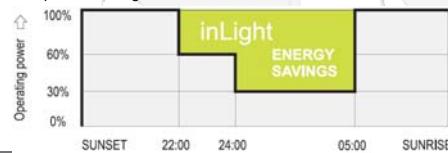

System Description

inLight Application Server: is used to configure, manage and to have the reports and alarms of the entire system. It can have multiple users of different levels such are administrators, technicians and viewers. It can manage different time schedules for four seasons, seven days in a week and fifteen minutes interval for every single Slave module, there can be also managed different triggers with priorities.

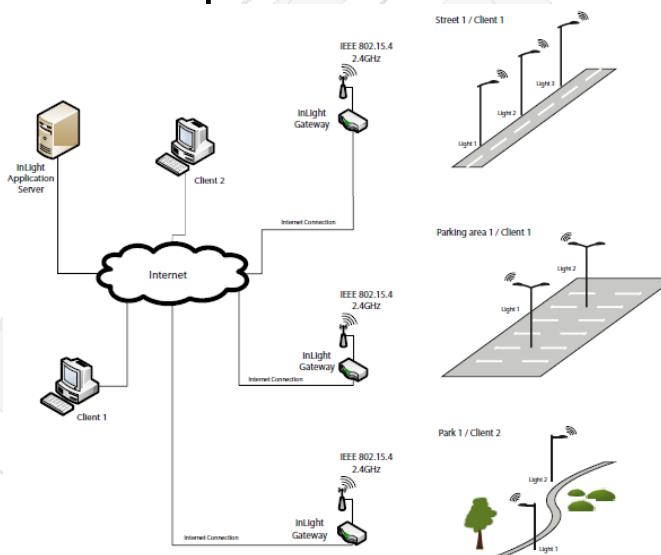

inLight Gateway: is the main gateway between the server and the slave modules (street Lights), it connects to the server via TCP/IP or GSM network at defined interval and it downloads / uploads the updates, reports, alarms and settings from the Slave modules via wireless IEEE 802.15.4 @2.4GHz to the Application Server. Up to fifty Slave modules can be connected to one Gateway.

inLight Slave modules: is used to configure, manage and to have the reports and alarms of the system. It can have different I/O digital and/or analogue and it can have different sensors based on the costumer requirements. Every module have the range of approximately 1km in open space.

System Description

Application Server: Scheduller

The screenshot displays the Thalea InLight Application Server's Scheduler module. The top navigation bar includes links for Dashboard, Reports, Users, Components, Mailing lists, Device types, Attributes, Device Groups, Devices, Gateways, Schedules, Modes, and Triggers. The user is logged in as 'superadmin'. The main content area is titled 'Schedules' and shows a list of scheduled tasks. One task, 'Thalea Office', is selected and shown in detail. The 'Timeline' section shows various events: Sunrise, Sunset, and Custom (Dim10, Dim20, Dim30). The 'Details' section shows the season as Spring and the day of the week as Monday.

Application Server: Triggers

The screenshot displays the Thalea InLight Application Server's Triggers module. The top navigation bar includes links for Dashboard, Reports, Users, Power suppliers, Mailing lists, Device Groups, Devices, Gateways, Schedules, Modes, and Triggers. The user is logged in as 'matija'. The main content area shows a list of triggers. One trigger, 'Mod 10%', is selected and shown in detail. The 'Trigger input parameters' section shows a condition: 'Traffic Control > 255'. The 'Trigger output parameters' section shows five devices (LSL_0001 through LSL_0005) with their attributes set to 'Dim Level' and values set to '99'.
